

## Radon Zones Map

The U.S. Environmental Protection Agency (EPA) created this map to identify areas with the potential for elevated indoor radon levels. The EPA Map of Radon Zones helps national, state, and local organizations implement radon-resistant building codes. The map should not be used to determine if a home in a given zone should be tested for radon. Homes with elevated levels of radon have been found in all three zones. All homes should be tested for radon.

What do the colors mean?

	<b>Zone 1 (red zones)</b>	Highest potential; average indoor radon levels may be greater than 4 pCi/L (picocuries per liter)
	<b>Zone 2 (orange zones)</b>	Moderate potential; average indoor radon levels may be between 2 and 4 pCi/L
	<b>Zone 3 (yellow zones)</b>	Low potential; average indoor radon levels may be less than 2 pCi/L
